SUMMARY

IoT-focused IT student with 5 months of experience as an IoT Engineer Intern, building end-to-end systems integrating embedded hardware, real-time data processing, and cloud platforms. Experienced in building full-stack IoT solutions using AWS Cloud, ROS 2, and embedded hardware to solve real-world problems through hackathons and projects.

EDUCATION

Asia Pacific University

2023 - 2026

Bachelor of Science (Hons) in Information Technology (Internet of Things) | CGPA: 3.7

EXPERIENCE

Winner of the AWS CendekiAwan Competition 2026

May 2026

- Developed an AI-powered healthcare platform that analyzes vital signs, predicts possible diagnoses, and recommends suitable medical specialists.
- Built a multi-agent system using 6 specialized AWS Bedrock AI agents to provide more comprehensive and reliable health analysis from different clinical perspectives.
- Developed predictive health and epidemic risk monitoring features that assess future health conditions and infection risks based on vital signs, lifestyle, and user habits.

IoT Engineer Intern – Iotech Solutions

June 2025 - November 2025

- Contributed to 3+ IoT development projects during internship, including flood monitoring, AMR automation, and wearable data solutions involving hardware, firmware, and cloud integration.
- Performed circuit design, firmware development, sensor calibration, and system testing for reliable IoT deployments.

AWS Hackathon Finalist – AMR Medical Inventory System

October 2025

- Built an autonomous mobile robot in a team hackathon using ROS 2 and SLAM navigation, integrated with AWS cloud for real-time inventory tracking and a monitoring dashboard for hospital logistics.
- Designed an AI-assisted medicine dispensing system with a YOLO-based camera that verifies medication correctness before allowing drawer access, reducing the risk of wrong medicine being dispensed.

PROJECTS

MediGuard – AI-Powered Clinical Assistant with Multi-Modal Sensor Fusion

- Built a serverless healthcare web app with a 6-agent AI council on Amazon Bedrock (Claude Sonnet and Haiku) backed by 8+ AWS Lambda functions, including a blood pressure prediction model trained with XGBoost.
- Integrated dual-source vital sign scanning using a camera-based rPPG pipeline (OpenCV and YOLOv8) and an ESP32 mmWave radar, alongside core clinical modules for AI health analysis, appointment booking, emergency hotline, and a patient health passport.

ADDITIONAL INFORMATION

Technical skills:

- Programming:** Python (Intermediate), Java (Basic), PHP (Basic), SQL (Basic), Flutter (Basic)
- Web Development:** HTML, CSS, JavaScript (Intermediate)
- IoT & Cloud:** AWS, Firebase, Node-RED, Raspberry Pi, MQTT, ESP32, Arduino (Intermediate)
- AI, Robotics & Engineering:** YOLOv8, ROS 2, SLAM, SolidWorks (Basic)
- Tools & Version Control:** Git, GitHub, Cisco

Language: English (Professional), Mandarin (Conversational), Bahasa Indonesia (Native), Bahasa Melayu (Conversational), Hokkien (Native)

Certification: AWS Academy Graduate - Cloud Architecting - Training Badge, Vice Chancellor's (VC) List for Academic Excellence (2024), Cisco (Network Security, Introduction to Networking)
